## MAJOR AREAS OF RESEARCH INTEREST

### *Research Areas*

1. Reducing hazardous substance use and risks for sexual violence through brief online, group, and in-person interventions with adolescents, young adults, and veterans
2. Understanding and addressing barriers to behavioral health service utilization among diverse groups; examining novel methods for reaching military populations in need of care and other difficult-to-reach groups
3. Examining comorbid mental health and substance use concerns among adolescents and adults
4. Examining the correlates of marijuana use and consequences in a changing legal policy environment

#### *Understanding E-cigarette Use, Smoking Risk, and Cessation Needs among Young Adults*

This mentored postdoc study aims to qualitatively identify factors that are associated with e-cigarette use (i.e., vaping) initiation, smoking risk, and barriers to quitting vaping among young adults. We also aim to gather feedback about e-cigarette users' preferences and thoughts about what they believe should be included in a vaping intervention that would garner acceptability and engage young adults in vaping cessation efforts.

#### *Using Machine Learning to Predict Daily PTSD and Cannabis Use Disorder Symptoms among Non-Treatment Seeking Veterans*

This study focuses on a sample of veterans recruited entirely online who screen positive for problematic cannabis use and PTSD, yet are not currently receiving treatment, and examines how passive data collected via wearable devices and smart phones can be used to detect clinically significant increases in PTSD symptoms and cannabis use over the course of three months.

Role: co-Investigator

#### *Life Course Perspective on Alcohol and Drug Use Trajectories from Adolescence into Adulthood*

This study, STRATA-XP (eXPanded), will continue to annually assess the alcohol and drug use of youth age 24-28 who have been part of a longitudinal study since age 10. It is focused on understanding the developmental trajectories of alcohol use, risky drinking, and alcohol use disorders and the correlates of "maturing out" of heavy drinking.

In this study, we will modify an established brief mobile-based mindfulness intervention developed for veterans with PTSD (Mindfulness Coach) to include Mindfulness-Based Relapse Prevention content; evaluate feasibility, usability, and acceptability of the developed intervention; and conduct a pilot randomized controlled trial with veterans outside of the VA to provide support for a larger project to test the revamped app on a larger scale.

*Supplement: Preventing Alcohol Misuse among Young Adult Veterans through Brief Online Intervention*

This research project is a supplement to R01AA026575 (PI Pedersen). The primary objective is to leverage a large existing sample of veterans in the community outside of the Veterans Healthcare System (VA) to examine changes in substance use, mental health, and social and economic health over an 18 months period: from one month prior to the COVID-19 pandemic to three time points over the next 18 months since the pandemic began in the United States. Information gleaned from this study will be used to develop outreach, intervention, and policy recommendations to draw attention to the unique needs of the veteran population outside the VA that has been affected by COVID-19.

*Improving the Implementation of Evidence-based Drug Prevention Programs in Schools*

This project will compare the effectiveness of a popular drug prevention program, Project ALERT, alone and combined with an implementation support tool known as Getting To Outcomes, to a no-intervention control group among a large sample of middle school youth. We will evaluate both implementation outcomes (e.g., staff capacity, program fidelity) and student substance use outcomes.

The goal of this study (STRATA) is to build on a diverse dataset by conducting 4 additional annual surveys from age 20-24 from a sample followed from age 11. These unique data will: 1) identify individual, peer, family, and neighborhood factors that may impact AOD trajectories; 2) assess racial/ethnic differences; 3) examine how AOD use trajectories during adolescence affect functioning across three different domains in emerging adulthood; and 4) longitudinally predict how transitions to young adulthood (e.g., employment, relationships) affect subsequent AOD use, other risk behaviors, and health-related quality of life.
